DEVACON

PRESS RELEASE

eMODAT allows for mobile data collection via BlackBerry 10

At the 'BlackBerry Experience Forum', Devacon GmbH is presenting its flexible workflow management system

On occasion of the upcoming launch of BlackBerry 10, the smartphone manufacturer is going on a world tour showcasing its latest innovation in twelve international cities. Devacon GmbH is participating as one of the selected partners in the events in San Francisco, New York, London, Dubai, and Frankfurt am Main. On display: its multilingual workflow management system eMODAT.

eMODAT adapts to a wide range of individual needs and requirements concerning the creation of mobile forms and of course it has been designed to run on BlackBerry 10. Forms and question sets can be created via the PC browser and then sent to the BlackBerry devices. Thanks to an automatic remote synchronisation process, the mobile forms on the smartphones, laptops, PCs and tablets are always up to date. On top of that, eMODAT offers its users direct integration of the mobile forms into any database – be it Oracle, MS SQL or SAP.

The application is controlled via user or group access, implemented either locally or via Active Directory. Integrated user management makes it possible to define roles and profiles with different access rights to an excessive list of features and functions.

Customers profit from the large number of possible applications. In hospitals, for instance, eMODAT can be employed to document and evaluate the strong points and the weak spots of nursing quality. Furthermore, the forms solution plays to its strengths when it comes to coordinating doctors' ward rounds or ordering medicine, food or supplies in general. Service reports and the creation of inventories are an easy task with eMODAT, too.

Field workers will be delighted by the facultative module 'Photos'. It facilitates damage reports and documentation by offering the possibility to file taken photos in a database and to display them in the final report.

→ Devacon is presenting eMODAT at the 'BlackBerry Experience Forum'.

→ Flexible, web-based data collection software available for BlackBerry 10.

→ Easy integration into existing infrastructures and any database system.

PRESS RELEASE

The Devacon team is looking forward to swapping ideas with the participants of the 'BlackBerry Experience Forum' and tell them more about the state-of-the-art control concept of eMODAT. In addition, trade visitors can take the opportunity during the show to have customized solutions developed by the IT experts according to their individual requirements.

About eMODAT:
eMODAT is a development of Devacon GmbH. Since 2006 the IT experts from Ahrensfelde on the outskirts of Berlin have specialized in designing mobile software solutions running on the IT structure of BlackBerry. The flexible web-based data capturing software adapts to the customers' individual requirements regarding the generation of mobile forms – it is even possible to link different questions with customized functions and database-driven blanks. OTA transmission of the collected data guarantees users maximum flexibility and agility.
