

ProDictate Mobile mobile dictation

ProDictate Mobile

The dictation software from Devacon, enables mobile dictation on smartphones such as BlackBerry, iPhone, Android und Nokia E Series.

ProDictate Mobile is a mobile dictation solution which enhances smartphones with professional dictation functionality, reducing the effort and steps involved in recording and processing dictation for medical practices, law offices, hospitals and insurance companies – simply and at low cost. After the system software has been installed, dictation can be conveniently recorded, processed and sent. Our extended versions, ProDictate Mobile Advanced and Pro Dictate Mobile Enterprise provide you with public key cryptography for secure encryption of your dictate.

ProDictate Mobile is a modern and flexible client-server architecture enables it, to connect remote workers cost-effectively via reliable data transfer. Data export and complete integration with internal back-office solutions and HIS systems are available. The author can select file references prior to dictation. Thus dictations can be referenced conveniently and then correctly filed by the transcriptionist. This saves time and processing steps and also reduces operating expenses thanks to faster and improved workflow. Additionally our solution provides fully automatic speech recognition with automatic delivery to the author.

Once recorded and processed, dictation can be sent to existing digital dictation systems by UMTS, WLAN, GPRS or e-mail. Automatic data import by the server ensures that dictation is instantly available to transcriptionists. The dictations can be replayed using ProPlayer playback software and controlled by a foot switch. In addition to supporting the AMR format, ProPlayer is a professional playback application for AMR, DSS, DS2, OKIADPCM, TRUESPEECH and WAV encoded files.

Benefits

- Easy installation
- Seamless database integration
- AES encryption of data and data transfers
- Supports BlackBerry, iPhone, Android and Nokia E Series
- Easy licensing and remote configuration
- Data can be easily exported to other dictation solutions

Features

Turns your Smartphone into a modern, easy to use digital dictation device

Single User and enterprise versions available

Geographically distant employees can be easily linked into digital dictation infrastructure

Supports recording, playback, fast-forward, rewind, flag setting, delete and insert

Utilizes AES encryption

Remote configuration via ProDictate dictation management system

Integrates seamlessly with server based speech recognition solutions

Supports BIS, BES, Direct TCP, UMTS, WLAN, GPRS
