mobile dictation

ProDictate Mobile

ProDictate Mobile is a mobile dictation app for iPhone, Android, and BlackBerry. Dictations can be sent directly to a transcriber or transferred to central dictation servers via GSM, WLAN or e-mail. Full transparency makes integration easier, and is the most cost-effective dictation app with a backend system on the market. Sold by Devacon GmbH, ProDictate Mobile works best if you give it permissions for your device's camera, microphone, camera, BlueTooth, and photos. Each version of the app is free, though in-app purchases are available.

ProDictate Mobile is compatible with ProPlayer, which plays SPEEX AudioCodec files. This app works best when collaborating with ProDictate, the backend system that allows a smooth dictation workflow. However, you can use ProDictate Mobile without ProDictate.

Features
