

Data Sheet for ProPlayer

ProPlayer

ProPlayer is a tool allowing the user to playback high-quality dictation recordings on a Windows PC. The user interface allows the user to quickly and easily view dictation information that is important to the user. ProPlayer is compatible with USB foot switches used to control the audio file playback. Footswitch controls include jogging forward and backward in the audio file. Playback speed can be adjusted to better listen to problematic dictations. ProPlayer supports most major audio formats including MP3, WAV, and ADPCM. ProPlayer also supports DSS and DS2 files and allows you to playback encrypted dictations by entering the DS2 file password. Save the passwords securely in ProPlayer for DSS and DS2 files reducing the need for manual entry, thereby eliminating time-consuming work. Integration into different systems and environments is possible with ProPlayer. Ease of use and fast installation delivers a practical solution for all transcriptionist workplaces.

Features

- Secure Application Installation
- MP3, WAV, DSS and DS2 file Compatibility
- USB Footswitch Controller Compatibility
- Secure Password Memory
- Variable Playback Speed Controls
- High-Quality Playback
- Flexible System Integration
