

Features

Features of eMODAT

Sector-independent workflow management system

Available for:

- iPhone, iPad, iPad mini, iPod touch
- devices with an Android operating system
- BlackBerry

System characteristics:

- The basic system 3.0 comprises the general server components for mobile workflow management. The administrator interface provides the means to manage user permissions, roles and form templates individually.
- Active directory integration allows setting up user accounts and managing them via Windows.
- Lookup guarantees data transmission from external sources.
- The module Data Export facilitates exchanging the captured data with external systems.
- By means of the function Reporting users generate Excel files and PDF documents.
- Photos: optional application for documentation purposes
- Thanks to Web Client Online users capture data with their smartphones independently of the installed eMODAT client.
- Via the In-House License Manager users register and manage corporate licences.
- Captured data, questionnaires, and service reports can be sent to users as a PDF file via the module E-Mail Notification.
- HL7 Integration enables the connection to standard hospital information systems (HIS).
- On demand: development of additional, customized modules

Advantages:

- to be used across sectors; software adapts to the users' needs
- compatible with all standard interfaces

Features

- simple integration into existing infrastructures; smartphones on hand can be used
- effortless database synchronization with operating systems such as Oracle, MS SQL, and SAP
- offline mode: unrestricted data transmission regardless of network or WLAN connections
- economy of time thanks to real-time communication
- comfortable direct access to corporate data even in transit
- wide range of optional modules
- possibility to create individualized forms
- centralized user management

About eMODAT:

eMODAT is a development of Devacon GmbH. Since 2006 the IT experts from Ahrensfelde on the outskirts of Berlin have specialized in designing mobile software solutions running on the IT structure of BlackBerry. The flexible web-based data capturing software adapts to the customers' individual requirements regarding the generation of mobile forms – it is even possible to link different questions with customized functions and database-driven blanks. OTA transmission of the collected data guarantees users maximum flexibility and agility.
